## [57] ABSTRACT

An apparatus for producing heat to enhance an animal lure scent containing a hollow body, a base removably disposed to one end of the hollow body, and a body cap rotatably secured to another end of the hollow body. An electronic circuitry is disposed in the hollow body and includes a heat pot for supplying an odorless heat having a temperature of the body temperature of an animal to be lured. A scent pad is positioned against and over the heat pot to hold a scent of the animal to be lured and to insulate the heat pot during operation.
